Professional Summary

Computer Science and Engineering student at VIT Chennai, concurrently pursuing a BS in Data Science and Applications at IIT Madras. Builds practical AI/ML and database-driven systems through academic projects and hackathons, with a focused interest in generative AI, LLMs, and machine learning.

Education

B.Tech in Computer Science and Engineering (Core) Expected 2029
VIT Chennai

BS in Data Science and Applications Expected 2029
Indian Institute of Technology (IIT) Madras

Technical Skills

Programming & Web: C, C++, Python, SQL, HTML, CSS, JavaScript, Data Structures & Algorithms
AI & Machine Learning: Machine Learning Fundamentals, Random Forest & Ensemble Methods, Deep Learning, Neural Networks, NLP, Generative AI, LLMs, Prompt Engineering
Tools: Git, GitHub, Database Design

Projects

Movie Ticket Booking System Code on GitHub

- Designed a relational database modeling Users, Movies, Theatres, Shows, Seats, Bookings, and Payments, normalizing the schema to eliminate redundancy
- Wrote SQL queries and stored procedures for show scheduling, real-time seat availability, and booking/cancellation logic, preventing double-booking through synchronized payment records

Technologies: *SQL, DBMS, Database Design*

Disease Prediction Using Random Forest Code on GitHub

- Built a Random Forest classifier to predict disease likelihood from patient health data, handling preprocessing, encoding, and feature selection for the most relevant health indicators
- Tuned hyperparameters (estimators, tree depth) and evaluated performance using accuracy, precision, recall, and confusion matrix analysis

Technologies: *Python, Scikit-learn, Machine Learning*

Operating Systems Project (In Progress) Code on GitHub

- Implementing and comparing CPU scheduling algorithms, process synchronization, and memory management techniques to analyze turnaround time, waiting time, and CPU utilization trade-offs

Technologies: *C, C++, Process & Memory Management*

FinTech Web Application Code on GitHub

- Built a responsive front-end for a finance-oriented web application using semantic HTML and custom CSS (flexbox/grid), translating wireframes into a functional, browser-ready interface

Technologies: *HTML, CSS, JavaScript, Front-End Development*

Certifications

Introduction to Artificial Intelligence, Google/Cisco/AWS (2026) | Introduction to Modern AI, Cisco Networking Academy (2026) | Pursuing further AI coursework via IBM SkillsBuild and DeepLearning.AI

Hackathons & Events

- Smart India Hackathon (SIH) 2025 — presented the team's problem statement, proposed solution, and technical approach to the evaluation panel
- Participated in multiple front-end development, web development, and technical workshop events at VIT Chennai
